FOREWORD

Agriculture occupies important position in the context of economic development of the State. Planning for development for arid zone of Rajasthan has to be based on detailed statistical information of relevant aspects. The present publication is being brought out keeping these requirements in view. It provides district-wise time series information for the 22 years period ranging from 1956-57 to 1977-78. It covers data on land utilization, area and yield of principal crops, irrigation, rainfall, agriculture implements and machinery and livestock and poultry.

It was a long felt need that all available information on different aspects related to agriculture of Western Rajasthan is available in a compiled form. I am extremely happy to see that Mr. S.P. Malhotra, Head, Division of Economics and Sociology and his colleagues Mr. B.S. Gupta, Scientist S-1 (Statistics) and Mr. Daulat Goyal and Mr. Vishnu Taimni, TA's have compiled very useful statistical information in the form of technical bulletin which I am sure will be much useful to the scientists and for those who are interested in the agriculture development of arid zone of Rajasthan.

October 1980.

H. S. MANN
Director
CAZRI, JODHPUR

PREFACE

Realizing the problems of the arid zone of Rajasthan and its vital role in the development of national economy, several research and development agencies are engaged in finding out the solutions to the problems of the desert region. It was therefore, felt necessary to provide basic data pertaining to the human population, the livestock population, the land use, crops grown, irrigation etc. for arid zone of Rajasthan at one place. The present publication provides such necessary informations and has been compiled for the arid districts of Rajasthan from the source publications of Statistical Abstracts, Nineteen years of Agriculture Statistics, Directorate of Economics and Statistics, Rajasthan, Census of India 1971, publication of the Directorate of Census Operations, and from other revenue records published by Board of Revenue Rajasthan.

I am sure, the data provided in the publication shall be quite fruitful for the research workers as well as for those engaged in the development programmes for the arid districts.

S. P. MALHOTRA

Explanatory Notes on Population, Land, Crops and Livestock Statistics

1. General

1.1. *Geographical area* : The geographical area of the state/arid districts of Rajasthan, furnished by Central Statistical Organisation is based on the Surveyor General of India's data.

1.2. *Rainfall*

The Table gives annual rainfall from 1956 to 1978 and the normal annual rainfall which is the average of rainfall data based on fifty years of data ending in 1950. It is tabulated by the Board of Revenue (Land Records) Rajasthan, Ajmer.

1.3. *Population*

The Table gives the decennial growth of population from 1901 to 1971 as provided in the Census reports.

2. Land utilization

- (i) *Reporting area for land utilization purposes according to village papers* : This represents the area for which data on land use classification are available according to village papers and are based on figures given in the Annual Tables of Agricultural Statistics.
- (ii) *Forest* : This includes all actually forested area or land classed or administered as forests under any legal enactment, whether State owned or private, and whether wooded or maintained as potential forest land. If any portion of such land is not actually wooded but put to some agriculture use that portion is included under the appropriate heading of cultivated or uncultivated land.
- (iii) *Land put to non agriculture uses* : This includes all lands occupied by buildings, roads and railways or under water e.g. rivers, canals and other lands put to uses other than agriculture.
- (iv) *Barren and uncultivable land* : This covers all barren and uncultivable land like mountains, deserts, etc. Land which cannot be brought under cultivation except at an exorbitant cost is classed as uncultivable whether such land is in isolated blocks or within cultivated holdings.

- (v) *Permanent pastures and other grazing land* : This covers all grazing lands, whether they are permanent pastures and meadows or not. The common land in the village and grazing lands within the forest area are included under this head.
- (vi) *Land under miscellaneous tree crops, etc* : All the cultivable land put to some agriculture use but not included under net area sown is included in this class. Land under Casurina trees, hatching grasses, bamboos, bushes and other groves, trees for fuel, etc. which are not included under Orchards are placed in this category.
- (vii) *Culturable waste* : This includes all lands (i) which have once been cultivated but were later abandoned due to one reason or the other and (ii) areas definitely known to be cultivable, provided both these types of land can be reclaimed at a reasonable cost and with a reasonable effort. Such lands may either be fallow or covered with shrubs and jungles which are not put to any use. Land once cultivated but not cultivated for five completed years in succession is also included in this category.
- (viii) *Other fallow land* : This includes all lands which were taken up for cultivation but are temporarily out of cultivation for a period of not less than one year and not more than five years.
- (ix) *Current fallow* : This class comprises of cropped area which are kept fallow during the current year only. If any seedling area is not cropped again in the same year it is treated as current fallow.
- (x) *Net area sown* : It represents the actual physical area under crops and orchards, the area sown more than once in the same year being counted only once.
- (xi) *Total cropped area* : This represents the total area covered with crops, i.e. the sum total of areas covered by all the individual crops, the area sown with crops more than once during the year being counted as separate area for each crops. Thus, it is the total of net area sown and are sown more than once.
- (xii) *Area sown more than once* : This represents the areas on which crops are cultivated more than once during the agricultural year. This is identical with the difference between the total cropped area and the net area sown.

3. Area under Principal Crops

The figures of area under principal crops are compiled by the Board of Revenue (Land Records) Rajasthan, Ajmer, from the Annual Agricultural Statistical returns prepared by the revenue staff.

4. Production of Principal Crops

The production figures are obtained either through eye estimates or by multiplying the average yield obtained from crop cutting experiments for major crop growing districts by the area figures reported in the revised final forecast. If a district is not a major district, growing a particular crop, the average yield of the revenue division to which it belongs is adopted as average yield for that district and the production is worked out.

5. Irrigation

Net irrigated area: The area irrigated from different sources represents the net irrigated area. If two or more crops are irrigated in the same year from the same source, the area is counted only once. The data on irrigation by sources is compiled by the Board of Revenue (Land Records) Rajasthan from the data contained in the Annual Agriculture Statistics Returns prepared by the revenue staff.

6. Agricultural implements and machinery

The figures relating to the agricultural implements and machinery in actual use for 1956, 1961, 1966, 1972 and 1977 are based on Quinquennial Livestock Census.

7. Livestock and Poultry

The figures relating to the Livestock and Poultry for the years 1956, 1961, 1966, 1972 and provisional data of 1977 are based on Quinquennial Livestock Census (Source, Board of Revenue, Ajmer)
